

**Amendments to the Abstract:**

**Replace the Abstract with the following amended Abstract:**

-- A method for accessing a service offered by a service provider on a communications network (2) from a terminal (T) through a multichannel access network, wherein the (1). ~~The~~ service provider delivers information at least concerning data about the address (~~@, P~~) of ~~said~~ the service in the communications network (2) to a mediation module (4). ~~The mediation module~~ (4) which determines at least one identifier (~~SId, SCIds~~) of a channel that is usable by the terminal (T) for accessing the service and associating ~~said~~ a channel identifier ~~[[to]]~~ with information delivered by the service provider (S). The terminal (T) receives ~~said~~ the channel identifier associated with information from the mediation module (4) when the service is detected. --
